

I would like to inform you about suspicious activity regarding the certificates of conformity and I would like to ask you to investigate on this matter.

Czech customs noticed that several certificates accompanying the fruit and vegetables exported from Republic of Türkiye recently might be falsified. Please see enclosed the examples of such certificates. We assume that the certificates were issued in the electronic format without an electronic signature. Since the Czech custom do not accept this format without an electronic signature, the exporter manually inserts the snapshot of the seal with a signature from another certificate in the pdf certificate and prints the certificate with this inserted seal. As you can observe, the seal and the signature are identical, it is blurred compared to the rest of the text and you can recognize the pixels.

By this interference with the certificates, the exporter have committed an unlawful act obviously. Please inform the exporters this fraud is unacceptable.
